Attachment E	Withdrawn/Terminated Projects	

I. Introduction

This report describes CY 2012 performance by existing grantees and CY 2013 new grants under the **Job Development Investment Grant** (“JDIG”) program, pursuant to North Carolina General Statute (“G.S.”) §143B-437.55(c). Information presented includes the number of JDIG applications submitted, a listing of grants awarded and accepted; the results of the Walden cost/benefit analysis (in terms of net state revenue and impact on state gross domestic product); a description of each project awarded a grant in 2013; the term of each grant; the percentage of withholdings used to determine the amount of each grant; job creation, investment, and average annual wage targets; the state’s maximum annual liability under the grants, amounts disbursed to-date under outstanding grants (to companies and to the Utility Account), company performance results under the grants, and eligible withholdings received from grantees.

II. JDIG Program Summary

The JDIG program, adopted by the General Assembly in the 2001-2002 session, became effective January 2003 and is currently scheduled to sunset on January 1, 2016 (G.S. §143B-437.62). It is a performance-based economic development incentive program that provides annual grant disbursements for a period of up to 12 years, to new and expanding businesses based on a percentage of withholding taxes paid by new employees during each calendar year of a grant. This percentage ranges from 10% to 75%. Grants are made to qualifying companies by the North Carolina Economic Investment Committee (the “EIC”), subject to caps set by the General Assembly on future grant year liability. The EIC consists of five members: the Secretary of Commerce, the Secretary of Revenue, the State Budget Director, and one appointee by each house of the legislature.

When deciding whether to award a grant and the appropriate amount and term of a grant, the EIC considers both economic and fiscal impacts. It conducts an extensive review and analysis of applications submitted by proposed grantees, considering factors enumerated in the JDIG statute and the Criteria for Operation and Implementation of Job Development Investment Grant Program (“Criteria”), adopted pursuant to G. S. §143B-437.52 and 54(d), which govern program administration. The EIC determines how a proposed project benefits the state, and, in particular, whether the fiscal benefits of the project, as measured by estimated tax revenues to the state, outweigh the total General Fund incentive costs to the state. The analysis of state revenue impacts is conducted using an economic model developed by Dr. Michael Walden of North Carolina State University, which has been updated since the first version in 2002.¹ Based on industry data, accepted economic impact modeling techniques, and information in JDIG applications, the model estimates income and employment effects (direct, indirect, and induced), calculates expected effects on state expenditures and revenues, and the likely net effect on revenue to the state’s General Fund. The Walden model includes all state incentives expected to

¹ Walden, Michael. [A Model to Estimate the Economic Impacts of Business Location in North Carolina: Version 3](#). Developed for the NC Department of Commerce. September 2007 (with updates provided regularly).

be provided from the General Fund, known at the time of application, in its calculation of net state fiscal cost.

The statutory cap on the number of awards the EIC can make was eliminated for 2012 grants (prior to that the number was capped at 25); however, the total future annual liability for all grants awarded in any single calendar year has been capped at \$15 million per year. For the Fiscal Year biennium from July 2013 through June 2015, however, the cap on maximum state liability for new awards was adjusted to \$22.5 million, and from July 2015 until the program's scheduled sunset date at the end of 2015 the liability cap is \$7.5 million. In most years, the cap has not been reached. Also, regardless of the stated liabilities under grants awarded, many companies' performance does not result in eligibility for the full annual amount possible under their respective agreements. The maximum payments for grants awarded during CY 2003-2013 will be less than the maximum theoretically possible. For example, for performance in CY 2012, payments were made for 83% of total liability to active grantees (not counting terminated or withdrawn grantees).² Each grant agreement specifies the maximum amount for which a company is eligible in each of its grant years. The state's maximum annual liability for grants made in 2012 is included in Attachment A1, with the maximum liability to the grantee in Attachment A2, and the maximum liability to the Utility Account in Attachment A3. The Utility Account receives 25% of the value of every grant payment earned by companies for projects located in Tier 3 counties and 15% of the value of every grant payment earned by companies for projects located in Tier 2 counties. Funds in the Utility Account are made available for infrastructure projects in North Carolina's more distressed counties.

Program Process: From Application to Award

All companies considered for a JDIG must first meet the minimum eligibility requirements described in G.S. 143B-437.53. Department of Commerce ("Commerce") Business and Industry economic developers work with an eligible business that is a good candidate for a JDIG award and recommend the project to senior staff for consideration. In the fall of 2013, the EIC adopted a pricing model that sets the preliminary JDIG offer based on a prospective grantee's location, job count, average salary, investment, and industry. If a potential project's parameters fall outside of the guidelines specified by the pricing model, the EIC is polled to determine whether members would support continuing the grant application process. Projects whose parameters fall within the model's guidelines do not require preliminary EIC approval before beginning the application process. Business and Industry staff helps the company identify what North Carolina can offer companies in comparison to other states the company is considering for the project. Commerce Finance staff informs the company of program requirements and begins the data collection process. The company then submits a draft application for review by Commerce staff, which works with the company to complete an accurate final application. During the application process, the company is required to submit the following:

- CPA-prepared financial statements

² Note that this calculation considers both payments to companies and to the Utility Fund. Additionally, several companies who participated in the program in 2012 and filed reports have not yet been paid and/or have not yet received the required certifications of their annual performance reports; neither liability based on their grants nor possible payments to them are included in this calculation.

- Employment profile & average annual wage for the proposed project
- Information on company's existing North Carolina jobs and activity
- Worker benefits, including health insurance and training
- Investment schedule
- Project description
- Information on the competitive nature of the project
- Information on corporate governance
- Company organization and activity information
- Application fee of \$10,000 (application fees were raised from \$5,000 in 2013)

An applicant is also asked to describe any anticipated environmental issues, anticipated impact of the project on public infrastructure, and information about compliance with laws and regulations. This is in addition to the extensive OSHA, environmental, and tax compliance checks and the cost-benefit analysis conducted by Commerce. An Economic Impact Analysis using the Walden Model estimates the expected net state revenue of a project. As with any model, the results depend on the model's assumptions, many of which are subject to uncertainty. Best practice in impact analysis dictates the adoption of the most conservative probable assumptions in order to avoid over-estimation of any positive benefits attributable to a given project.

The JDIG statute requires the EIC to find, based on the modeled estimates, that a proposed JDIG project's benefits to the state outweigh its costs to the state. The Walden Model measures this by estimating tax revenues. The EIC seeks to identify and select projects that are the most beneficial to the state after considering a number of different evaluation factors. Project application materials and the results of staff analysis are provided to the EIC and considered in one or more closed sessions. The EIC then chooses whether to propose terms it considers appropriate for a given project, and a term sheet is provided to the company. The term sheet outlines the structure and proposed terms of the grant and the conditions necessary to fulfill the grant requirements. If the company accepts the terms in writing and commits to locate the project in North Carolina, subject to the award of the grant, an open meeting is held by the EIC to award the grant, and a Community Economic Development Agreement ("CEDA") is executed. Grantees are required to submit performance reports by March 1st of each year following the end of a calendar year during the grant term, along with a reporting fee of the greater of \$2,500 or 0.03% of an amount equal to the grant less the maximum amount to be transferred to the Utility Fund.³ These reports allow Commerce and the EIC to assess grant performance and eligibility for disbursement. The actual disbursement amount for which the company is eligible is determined from Commerce's analysis of the annual performance reports. The Department of Revenue certifies the company's reported withholdings and the absence of overdue tax debts. All disbursements must be approved by the EIC before actual payment.

³ The fee was changed from \$1,500 in 2013.

III. JDIG Applicants and Grantees for CY 2013

During CY 2013, the EIC awarded 20 grants and received 18 applications.⁴ No grants were awarded to projects that did not locate in North Carolina. Table 1 lists the county and tier in which 2012 grantee projects have located or plan to locate, the first grant year, the length of the grant term, the percent of withholdings that will be the basis for grant payments, the maximum possible grant amount payable to the company, the maximum possible grant amount payable to the Utility Account, and the total grant amount.

Tier

Of the CY 2013 grants, two were awarded to projects locating in a tier 1 county, two were awarded to projects locating in a tier 2 county, and thirteen grants went to companies locating in a tier 3 county. Three projects were spread across multiple counties. These companies could contribute a maximum amount of approximately \$52 million to the Utility Account over the life of the grants.

Table 1. CY 2013 Grantee Terms and Award Amounts

Company Name	First Year of Eligibility	County	Tier	Number of Grant Years	Withholding	Amount to Company	Amount to Utility	Total Award Liability

Total:						\$ 172,378,400	\$ 52,335,600	\$ 224,714,000

⁴ It should be noted that Commerce developers interact with many more business prospects, but only those businesses that are likely to be good candidates for a grant award are encouraged to apply, as the \$10,000 application fee is non-refundable. If not a good candidate, developers work with companies to find other assistance to support locating their project in the state. Note that two of the 2013 awardees applied at the end of 2012. Twenty-one applications were received in 2013. Eighteen of these were awarded in 2013, one did not complete the application process but paid an application fee, one paid a fee but withdrew before consideration before the EIC (the fee was refunded), and the last is still seeking an award.

In CY 2013, 7 of the 20 JDIG grantees' first grant year is 2013. Of the remaining grantees, 10 will seek their first payment for performance in calendar year 2014, two grantees in 2015, and one grantee in 2016. Maximum state liability for grants awarded in 2013 is approximately \$225 million (over the entire grant period for all grants), consisting of \$172 million for companies, and \$52 million for the Utility Account.

Performance Minimums

Each grantee agrees to a set of performance requirements for job creation and average annual wages to be paid during each year of the grant; many grantees also have investment requirements. Grantees with existing employees in North Carolina are typically required to retain these positions before being given credit for new positions. A grantee's actual performance determines the grant payment it receives each year. The payment can never be more than the maximum annual state liability stated in each company's grant agreement for that year.

CY 2013 grantees are expected to create 8,072 direct jobs and are required to retain 7,491 jobs over their grant terms. Grantees are also anticipated to invest approximately \$1.1 billion in land, buildings and fixtures, infrastructure, or machinery and equipment and other tangible personal property at the project site. Table 2 outlines the target number of jobs, jobs to be retained, target average annual wage, and investment for each 2013 grantee.⁵ Anticipated job effects are reported at full employment for each project. For companies that show no capital investment requirement, this is generally due to the small size of expected investment (typically less than \$5 million). A company's annual compliance is measured using a weighted average of a company's compliance with job creation, average wages, and investment minimums.

⁵ The target numbers are based on the company's projections in its application. "Target average annual wage" is typically based on the lowest cumulative average wage the company expects to pay during a project's base period. As noted later in the text, the EIC often provides a cushion, such as a 10% reduction of these numbers, as the minimum performance requirement for a grantee to maintain compliance.

Table 2: CY 2013 Grantee Jobs, Wages and Investment

Company Name	Target Jobs	Jobs to be Retained	Target Average Annual Wage	Target Investment

XPO Logistics, Inc. II	287	245	\$ 51,614	\$ -
Total:	8,072	7,491	\$ 70,612	\$ 1,070,840,268

Attachment B provides historical and CY 2013 direct job creation requirements (specifically, the number of jobs to be created when the project has completed its job ramp up period, known as the “base period”). Grantees that have withdrawn or terminated from the program are not included in Attachment B. The minimum required job creation in order to avoid default is typically 90% of the target number of direct jobs, allowing flexibility for fluctuations and attrition, although sometimes the minimum is set at 95% or 100%, usually if projected job numbers or wages are relatively low. Typically, there is a lag between the time an award is made and the actual commencement of new project operations and hiring of permanent staff on which the grant is based. Many projects invest substantial time and dollars on construction, plant renovation, and equipment. As a result, many JDIG grantees do not create many positions in the year in which they are awarded a grant, and sometimes not for several years.

Estimated Economic Impact

The 8,072 new direct jobs associated with CY 2013 projects affect other sectors by increasing demand for goods and services by businesses and households. These indirect and induced (multiplier) effects are estimated to add 9,248 jobs, for a total estimated employment impact of 17,320 jobs. State Gross Domestic Product is expected to increase by almost \$14 billion over the life of CY 2013 grants. The projects are expected to provide a net fiscal benefit to the state of

approximately \$233 million during their grant terms. A complete listing of estimated economic impacts for all active and “closed” JDIG projects is presented in Attachment B.⁶

Table 3. Comparison of CY 2012 Grantees to CY 2013 Grantees

JDIG Grantees	Total Grant Award Liability	Expected Jobs	Jobs Retained	Expected Investment	Indirect + Induced Jobs	Total Jobs	Estimated NC GDP Impact (million)	Cumulative Net State Revenue (million)
Total CY 2012	\$ 134,699,000	7,076	9,116	\$ 1,000,796,839	10,008	17,084	\$ 10,734	\$ 145
Total CY 2013	\$ 224,714,000	8,072	7,491	\$ 1,070,840,268	9,248	17,320	\$ 13,592	\$ 233
Percent Change:	67%	14%	-18%	7%	-8%	1%	27%	60%

IV. General Description of Calendar Year 2013 Grantees

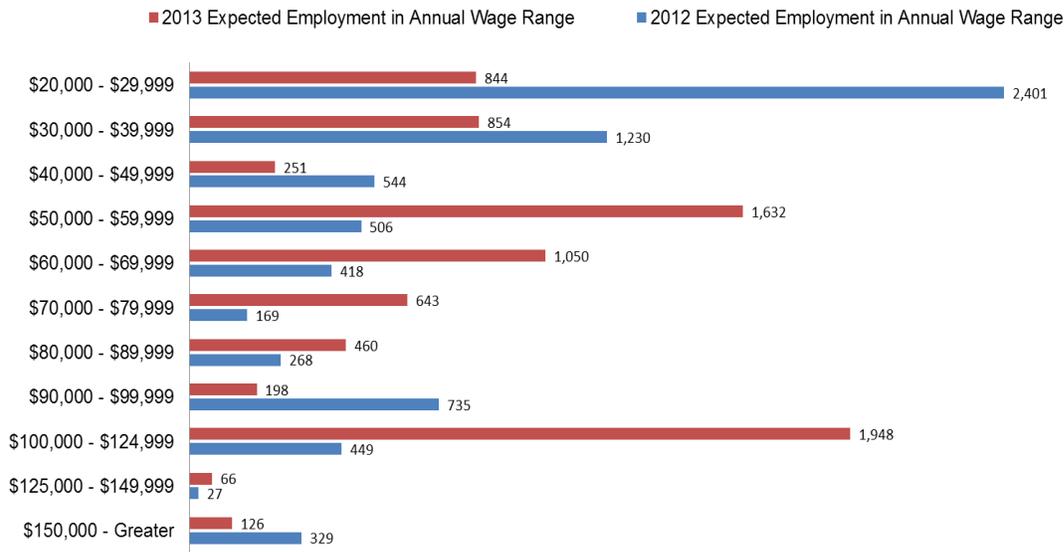

A project’s strategic importance to the state, region and locality is considered in the EIC’s grant decision-making process. Many companies offer employment, generous benefits, and long-term competitive potential. Projects also provide new employment opportunities for unemployed members of the labor force with project-relevant skills.

The industrial sectors of the projects are examined by the EIC to ensure that a project fits the strategic plans of the state and its region. CY 2013 projects include sectors such as headquarters, software development, textiles, biotechnology, manufacturing, and transportation logistics, among others. These projects require labor at a variety of skill levels and types -- lower-skilled assembly trades, high-skilled manufacturing production, and knowledge-intensive consumer and business services.

For all projects awarded in CY 2013, the target average annual wage of all employees is \$70,612. The CY 2013 target average annual wage at full employment is above CY 2012 grantees’ target average annual wage of \$57,341. Chart 1 compares the expected wage levels of CY 2013 grantees and CY 2012 grantees, along with the number of employees within certain wage ranges.

⁶ “Closed” refers to grantees that have completed their JDIG terms. It does not include “terminated” or “withdrawn” grantees. The 2003 grant to General Electric Company is the only closed grant.

Chart 1. Expected Jobs by Wage Increments: CY 2013 and CY 2012 Grantees

It is expected that 76% of CY 2013 project employees will earn over \$50,000 dollars annually. Wage information does not include some elements of employee compensation, such as health insurance, stock options, and other benefits. For all grants made, the company is required to pay at least 50% of employee health insurance premiums, although many pay more.

JDIG is the state’s flagship program for both retention and expansion of existing North Carolina companies and recruitment of new companies to the state. For existing businesses, a JDIG award not only supports new job creation, but can help protect existing jobs. Table 4 summarizes the estimated job effects and economic effects of 2013 grantees according to three classifications: “Expanding Operations,” “New Operations (Company New to NC),” and “New Operations (Company Existing in NC).” “Expanding Operations” represents companies that were awarded a JDIG for a project that is an expansion of an existing facility or a new facility in the same industrial sector as its existing North Carolina facilities. “New Operations (Company New to NC)” represents companies without a prior presence in North Carolina. “New Operations (Company Existing in NC)” represents companies with a presence in North Carolina, but whose JDIG was awarded for operations in an industrial sector that is different from that of its existing North Carolina facilities. Of the 20 projects, 14 are “Expanding Operations,” 4 are “New Operations (Company New to NC),” and 2 are “New Operations (Company Existing in NC).”⁷ It should be noted that with respect to the Grantee Profiles in Section VI, certain companies with existing operations in North Carolina have requirements that they retain the number of positions that exist at the time of their JDIG applications before counting any new jobs as eligible for grant payments, and other companies with existing operations do not have this requirement. The JDIG statute limits grant payments for jobs filled by employees that represent a net increase in the number of the company’s employees statewide, except where the EIC makes an explicit finding that the increase or maintenance of employment may be measured at the level of a division or

⁷ Industrial sectors are determined by research staff in consultation with applicants.

other operating unit of a business (a “Division Level Finding”), rather than at the business level; that this is necessary in order to secure the project to the state; and that the agreement includes terms to ensure that the business does not transfer existing positions to the project. This might be done where a company has distinct and separate operations and lines of business, under different management structures. An example of a case where a division level finding may be implemented would be a company with a large number of retail facilities that is seeking to locate a new headquarters operation for its national operations, in which case the decision is unrelated to decisions about retail site location.

Table 4. Comparison of New Operations to Existing Operations, CY 2013

2013 Grantees	Total Grant Award Liability	% of Total Grants	Expected Jobs	Expected Investment	% of Total Investment	Indirect + Induced Jobs	Total Jobs	% of Total Jobs	Estimated NC GDP Impact (million)
New Operations (Company New to NC)	\$ 20,297,000	9.0%	1,012	\$ 102,321,168	9.6%	1,209	2,221	12.8%	\$ 1,718
New Operations (Company Existing in NC)	\$ 5,892,000	2.6%	510	\$ 121,000,000	11.3%	483	993	5.7%	\$ 653
Expanding Operations	\$ 198,525,000	88.3%	6,550	\$ 847,519,100	79.1%	7,556	14,106	81.4%	\$ 11,221

V. JDIG Grantee Performance

This section examines actual results of active JDIG grantees since the program’s inception. As of the end of 2013, there were 72 companies participating in the program whose 2012 performance results have been certified.⁸ For analysis purposes, the companies are typically considered ‘reporting grantees’. This nomenclature describes the subset of companies that have been awarded a grant, created new jobs, and have reported activity for calendar year 2012 to Commerce that has been certified by the Department of Revenue, and are eligible for grant payments. Companies are required to provide the EIC with detailed annual reports during each calendar year in which they are eligible for grant payments. The reports document company compliance with performance requirements of their respective CEDAs. The companies must provide the EIC with information on the number of eligible jobs created, existing positions retained, wages paid for eligible positions, investment made, certification of employee health insurance, and fulfillment of environmental, tax, and OSHA requirements. Companies forgo a year’s grant payments for failure to achieve 80% compliance with the minimum requirements, based on a weighted average of performance factors, and may receive a pro-rated payment for compliance between 80% and less than 100%. If a company fails to achieve 100% of the minimum performance requirement for 3 years during its base period, the company is ineligible for a payment. At certain points of non-compliance, a company may lose its grant entirely.

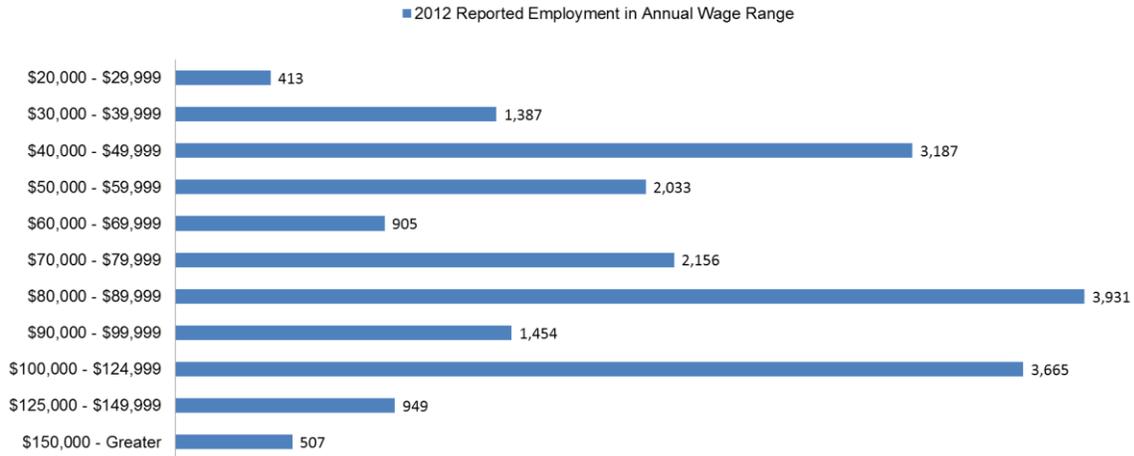

Attachment C displays the JDIG annual grant performance results that were reported in CY 2013. Most of these reports are based on CY 2012 performance, but some results for CY 2011 performance are included since they were certified in 2013. Companies must report by March 1

⁸ Actual participants in 2012 may exceed 72, but the exact performance and payments numbers cannot be established until reported results have been certified. This section covers only those participants whose 2012 (and some 2011) results have been certified and whose eligibility for payment was certified in 2013.

of each year following the end of a calendar year during their grant terms, and at that point Commerce staff analyzes and reviews grantee reports for eligibility. In 2013, Commerce and the EIC reviewed, certified, and awarded 80 companies for CY 2011 and CY 2012 grantee performance. Attachment D displays annual disbursements made for grants awarded in CY 2003-2012.

Chart 2 shows the actual certified average wage levels for the 72 companies who filed annual reports in CY 2013 for performance in CY 2012.

Chart 2. Reported Jobs by Wage Increment: CY 2012 Reporting Grantees

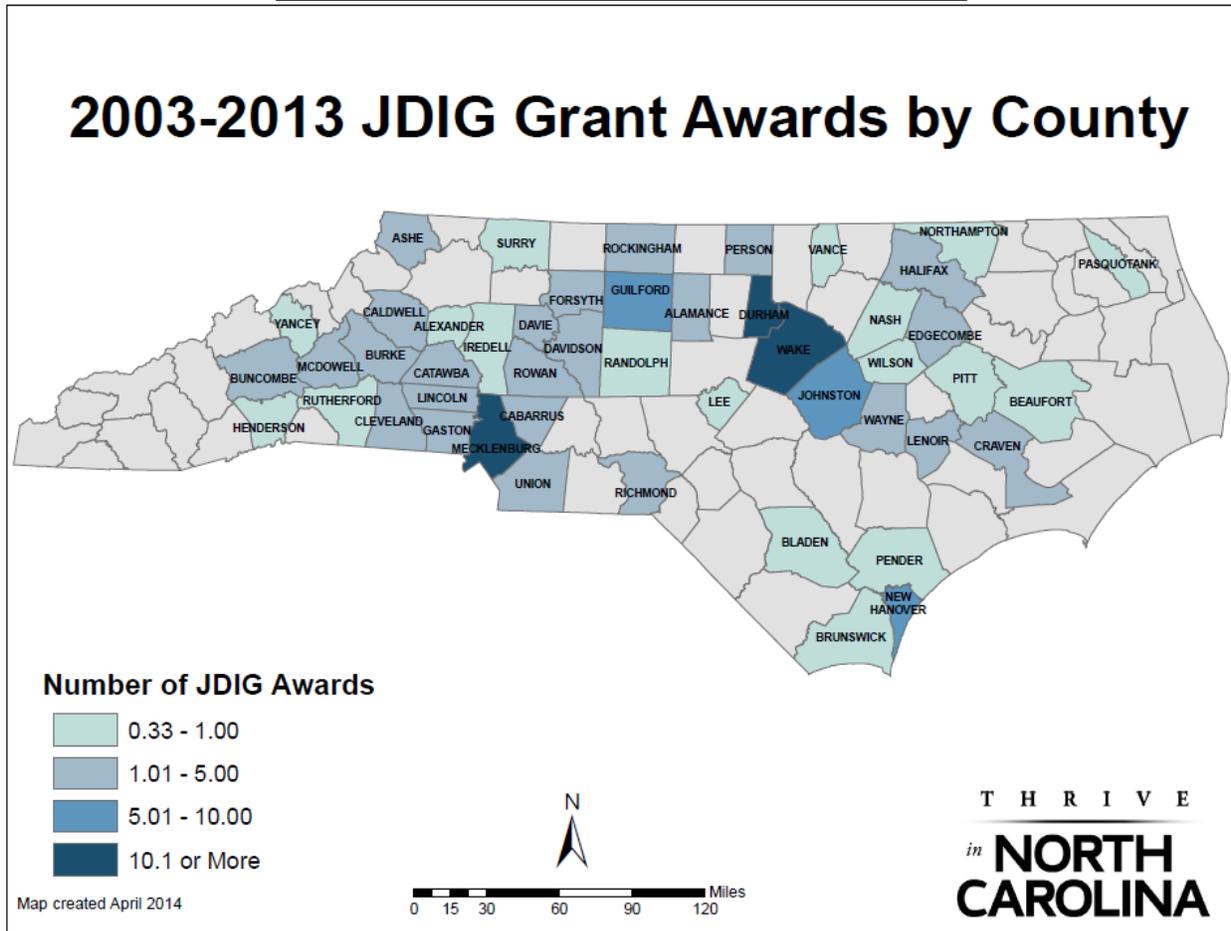

Distribution of Grants

An important goal of JDIG and other state incentive programs is the geographic distribution of benefits across the state. The JDIG program has two mechanisms to fulfill this goal. First, the Committee takes into account the economic characteristics of counties when awarding grants and setting grant terms. Second, for projects locating in tier 3 or tier 2 counties (relatively less economically distressed counties), 25% (in tier 3) or 15% (in tier 2) of the amount of the grant payment for which a company is eligible is deposited into the Utility Account.⁹ The annual deposits to the Utility Account will increase significantly as more projects become eligible for disbursements. Figure 1 summarizes the distribution of JDIG grants awarded in CY 2003-2013 by county.¹⁰

⁹ Utility Account funds may be used for construction or improvements to water, sewer, gas, telecommunications, high-speed broadband, electrical utility distribution lines or equipment, or transportation infrastructure, for existing or proposed eligible industrial buildings in economically distressed counties.

¹⁰ All JDIG awards including those terminated. In instances where a project received one grant for locating facilities in multiple counties, each county is shown as receiving an equal share of the grant awarded.

Figure 1. Location of JDIG Awards, CY 2003-2013

Environmental Impact

All JDIG projects are screened for necessary environmental permits and reviewed for potential environmental impacts. Commerce works closely with the Department of Environment and Natural Resources (DENR) staff during the JDIG review process. Upon receipt of an application, Commerce forwards a copy to the staff environmental consultant, who prepares a memo and a due diligence report for consideration by the EIC. To-date, there has been no indication that any existing grantee will experience difficulty obtaining needed permits, nor have there been significant concerns regarding the environmental impacts of existing projects. In addition, all grantees are required to certify they have received all required environmental permits when filing their annual report with the EIC.

VI. Grantee Profiles for Calendar Year 2013

AIG PC Global Services, Inc. (“PC Global Services”)

PC Global Services provides application technical support for its parent company, AIG Property Casualty, Inc. (AIG). These activities include the design, development, testing and deployment of software supporting various insurance functions.

This project creates a technology center that will provide application support for various business units and functions of AIG, including North American underwriting, global claims and other corporate functions.

AIG evaluated sites in Rock Hill, South Carolina in addition to North Carolina. The key factors in site selection included a skilled labor market, the proximity to universities/colleges, a competitive incentive package, the proximity to large financial institutions, the quality of life, and the proximity to a major airport.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

Allscripts Healthcare Solutions, Inc. (“Allscripts”)

Allscripts develops and markets clinical software. Allscripts recently created “Centers of Excellence”, with the goal of providing a concentrated and focused work environment while reducing complexity and cost. Raleigh was named one of these centers and Chicago the other.

This project consolidates of five engineering centers into one site. In addition to the Raleigh operation center, the company evaluated its Chicago headquarters as a potential location for the project.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

Areva NP, Inc. (“Areva”)

Areva is in the global nuclear industry, providing an integrated menu of services to utilities that cover all stages of the fuel cycle, nuclear reactor design and construction, and related services. Charlotte is Areva’s engineering “Center of Excellence”, providing engineering and project management for the nuclear fleet, new build activities, and services for the Department of Energy.

The project leverages Areva’s existing workforce locations through headquarters relocation and the expansion of operations. The company also considered a location in Virginia, which offered state incentives with a value of almost \$3 million.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

ASMO Greenville of North Carolina, Inc. (“GNC”)

ASMO North America, LLC (ANAM) is a manufacturer of automotive systems and a subsidiary of ASMO Co., Ltd., located in Kosai City, Japan. GNC produces radiator fan motors and wiper systems from the initial processing of parts (die casting/press) to the final assembly of the automated transfer lines. GNC is classified as a Tier 1 supplier, manufacturing and shipping directly to Original Equipment Manufacturers (OEM) such as Toyota, Chrysler, Honda, Ford, General Motors, Hyundai, and Kia.

This facility expansion will allow GNC to add more die cast machines, which in turn will support the growth of the wiper systems. The projected growth will allow GNC to increase its overall share in the wiper systems market to an estimated 34% (up from 30%) in North America.

ANAM requested proposals for the project from economic development agencies in Texas, Michigan, and North Carolina, where it has existing locations. The company based its decision upon local and state offers of incentive assistance, inherent operating benefits and disadvantages at each site, and other relevant factors, ultimately choosing the Greenville site as the location for this expansion once the anticipated North Carolina incentives were approved.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

Castle Branch, Inc. (“Castle Branch”)

Since 1997, Castle Branch has provided criminal and sex offender records, random and on-site drug testing, credit and social security reports, employment and education verifications, and professional licensure certification. In 2003, Castle Branch created CertifiedBackground.com, which is a provider of background screening, drug testing, and immunization record tracking solutions for colleges and universities nationwide.

This project expands its current operations. The competition for this project was California. Castle Branch acquired Apollo Services, located in Petaluma, CA in 2012, and with the acquisition acquired a client base on the west coast.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

DB Global Technology, Inc. (“DBGT”)

In 2009 in an effort to reduce its costs and increase its efficiency in development and maintenance of its software applications, Deutsche Bank AG (DBAG) created a new software company, DBGT. This brought the work that was performed in higher cost DB locations and services provided by third party providers in-house and changed where and how DBAG creates its software.

DBGT produces software applications for financial instrument trading, order management and transaction processing, algorithmic trading, real-time and complex risk calculations, and web-based front-end applications. It also produces software used for client regulatory reporting, booking and operational data management (transactional data warehousing), research systems (document management, web portals, research analytics), and grid computing. The project established in North Carolina focuses on strategic application development work transitioned from higher cost DBAG locations and development of technology solutions.

The company considered locations in North Carolina and Jacksonville, Florida. Company due diligence showed that both North Carolina and Florida have a deep labor pool of IT professionals who could provide the labor force within the range of salaries considered for this project. DBGT evaluated its return on investment and determined that expanding in North Carolina was incrementally more expensive than expanding in Florida; however, the company agreed that North Carolina’s offer of a JDIG for the project substantially reduced the gap, making North Carolina the final choice for this expansion.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

Electrolux Home Products, Inc. (“EHPI”)

Electrolux produces home appliances and appliances for professional use, selling more than 40 million products to customers in more than 150 markets annually. Electrolux products include refrigerators, freezers, washers and dryers, vacuum cleaners, dishwashers, and cooking products sold primarily under the Electrolux, Frigidaire, and Eureka brands in North America. The Electrolux entities that will participate in this project are all owned directly or indirectly by Electrolux North America, Inc. (ENA).

The company is expanding its existing corporate headquarters in Charlotte. The positions created are in the areas of research and development, accounting, marketing, administration, and executive management. The addition of engineering positions

represents the consolidation of engineering operations and employees into one engineering center.

In addition to North Carolina, EHPI management considered two other potential locations: South Carolina and Tennessee. South Carolina offered several desirable locations in York and Lancaster Counties. South Carolina submitted a formal proposal that included significant up-front cash incentives and cash grants valued at approximately \$54 million. EHPI recently established a large manufacturing facility in Memphis, Tennessee. That facility was located there after extensive analysis of the incentives offered in Tennessee, Alabama, and North Carolina. Tennessee was chosen in large part due to its superb incentive package.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

Evalueserve, Inc. (“EVS”)

Evalueserve, LTD is a global provider of custom professional research and analytics services, employing approximately 2,600 full-time professionals. It has research centers located in, among other places, China, Chile, Romania, India, and the United Kingdom.

This project’s operations are focused on financial services research and analytics. The company’s vision is to create a “Center of Excellence” in data analytics and big data science at the U.S. center.

The competing locations included Cleveland, Pittsburgh, Austin, Charlotte, and the Research Triangle Park (RTP) area. After reviewing each of these locations, Austin and Cleveland emerged as the final competitors to the RTP area.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

General Electric Company (“GE”)

GE consists of eight primary business divisions: Oil & Gas, Energy Management, Power & Water, Healthcare, Transportation, Capital, Home & Business Solutions and Aviation. GE Aviation is a leading provider of commercial and military jet engines and components, as well as avionics, electric power, and mechanical systems for aircraft with an extensive global service network to support these products.

This project brings new manufacturing to North Carolina, including a facility for the production of advanced ceramic matrix composite (CMC) materials for aircraft and gas turbine engines. CMC components are lighter weight than existing materials used in engine production and allow for higher temperatures, increasing engine efficiency.

Nine states including North Carolina were considered for the project. South Carolina’s incentive package was valued at \$14.8 million while Virginia’s totaled \$11 million.

Additionally, South Carolina had several local incentive packages worth over \$30 million over a 10-year period.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

Gildan Yarns, LLC (“Gildan”)

Gildan spins cotton and polyester into yarn for use in the textile industry. The company sells its yarn production to its parent, Gildan Activewear, for its worldwide knitting facilities. Gildan Activewear is a marketer and manufacturer of branded basic apparel. Gildan operates two facilities located in Cedartown, Georgia, and Clarkton, North Carolina and has approximately 230 employees. Gildan Activewear also owns Gold Toe Moretz, a leading supplier of branded athletic, casual and dress socks, and Gildan Activewear (Eden) Inc. (a related member to this grant), the distribution center serving the U.S. screen print market.

Gildan is constructing a new facility behind its facility under renovation in Salisbury, along with a second new facility in Mocksville, and an expansion/renovation of their existing operation in Clarkton. The company anticipates developing a campus-like setting for its new facilities and the adjoining land in Rowan and Davie Counties could enable future expansions at either or both locations.

For the two new approximately 650,000 square foot facilities that will house new yarn production in Davie and Rowan Counties, the company considered two sites in South Carolina: Chester County Industrial Park in Chester, SC and York County Industrial Park in York, SC. The Clarkton expansion was also in competition with an existing facility in Cedartown, Georgia, which is also owned by Gildan. There was sufficient area on the existing site of the Georgia facility to add new additional spinning frames. South Carolina offered an incentive package valued at approximately \$14 million.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

InVue Security Products, Inc. (“InVue”)

InVue was founded in 1972 as Alpha Enterprises, Inc. and since its inception the company has focused on providing products that help prevent retail theft. Based on a variety of factors, including the increased prevalence of smart phone and tablet products, investment in products and investment in a global sales and distribution infrastructure, the company expects to see sales grow at approximately 25% in each of the next five years.

This project is an expansion of the Charlotte headquarters facility that also includes engineering operations, quality lab, and a product showroom. The company plans to add an additional 20,000 square feet of space to serve as its innovation and design center.

The company considered several factors during the site selection process, including the proximity of the existing work force, airport access, quality of the local workforce, and quality of education, and healthcare. Based on these criteria, the search was narrowed to Mecklenburg County and Lancaster County, SC. The company received an incentive offer from the state of South Carolina valued at \$4 million over ten years.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

Ipreo US LLC (“Ipreo US”)

Ipreo Holdings LLC is a global provider of market intelligence, platforms that facilitate the issuance of equity and debt securities, and investor communications tools to the world’s leading investment banks, over 400 small and medium sized financial firms, and over 1,000 corporate clients.

Ipreo US is establishing a business center that will both mirror its New York HQ operations and serve as a base for future staff growth. Staffing includes product development, marketing, and analytical functions. The company considered several locations for this center, including existing domestic and international sites, as well as potential new “green field” locations.

Baltimore, Maryland was the alternative location considered for this project due to the company’s existing facilities in Bethesda Maryland, the depth of the labor pool, lower labor costs, and easy accessibility to the New York Metropolitan Area. The company was offered over \$5.5 million in incentives from the State of Maryland and the City of Baltimore. Additional forgivable loans and other tax credits were also offered.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

KSM Castings NC Inc. (“KSM”)

The direct parent of KSM, KSM Castings Group GmbH, was founded in 1947 as a private company. It produces light metal casting products (chassis, powertrain and body applications) for use in the automobile industry. From 1995 to 2011, KSM Castings Group experienced a compound annual growth rate of 9% per year, and constructed three greenfield facilities in Germany, China, and the Czech Republic.

KSM provides casting components to existing and new customers with a presence in the U.S. The company expects to establish a production facility of approximately 110,000 square feet and install 8-10 high pressure die-casting machines. KSM identified more than 60 possible site locations in Kentucky, Virginia, North Carolina, South Carolina, Alabama, and Tennessee. From that list, more than 20 sites were investigated. Three final sites were identified: Elizabethtown, KY, Auburn, AL, and Shelby, NC.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

MetLife Group, Inc. (“MLG”)

MetLife, Inc. is a leading global provider of insurance, annuities, and employee benefit programs, serving 90 million customers. Through its subsidiaries and affiliates, MetLife holds market positions in the U.S., Japan, Latin America, Asia, Europe, the Middle East, and Africa. The company consists of six segments: Retail, Group, Voluntary & Worksite Benefits, Corporate Benefit Funding, Latin America, and the Asia and Europe, Middle East and Africa (EMEA) Segments.

This project involves a range of functional activities in support of MetLife’s business. The positions generally fall into two general areas: Retail Business and Technology. The Mecklenburg County positions focus on the company’s retail business and servicing customers. New employees will include product experts in life insurance, property and casualty insurance, as well as customer and sales support. The Triangle site will house the company’s technology groups and includes functions such as enterprise infrastructure and architecture engineering, project management, and application solution functions and development.

St. Louis County in Missouri was the main competition for this project. The company represented that St. Louis County, Missouri offered a significant package consisting of the state’s Quality Jobs Program, state bonding initiatives, training funds and local sales and property tax offsets, which exceeded the value of the North Carolina package.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

Owens Corning Composite Materials, LLC (“CSB”)

Owens Corning was founded in 1938. Its products range from glass fiber used to reinforce composite materials for transportation, electronics, marine, infrastructure, wind-energy and other high-performance markets to insulation and roofing for residential, commercial, and industrial applications. Owens Corning operates within two segments: composites and building materials. In response to growing market demand for its products, the company is expanding with a new non-woven technology facility.

CSB undertook a competitive site selection process, with project analysis taking into account all items affecting the project's profit and loss, including: site costs, utilities, taxes, and labor. In addition to the chosen Gastonia, NC site, the company considered two sites in Georgia.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

Rack Room Shoes, Inc. (“Rack Room”)

Rack Room and its wholly-owned subsidiary, Off Broadway, operate over 400 retail stores in the U.S. selling branded and imported private label footwear and accessories. In

1995, the corporate headquarters was relocated to Charlotte. At the time of its grant application, Rack Room employed over 4,000 associates in over 350 stores in 29 states.

Rack Room and Off Broadway are consolidating their headquarters on a single North Carolina campus, providing increased leverage with vendors, allowing better pricing, and improving coordination. The companies looked at multiple South Carolina sites during the site selection process. The final decision was based on business environment, tax implications, and the availability of a qualified work force to support expansion plans.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

RC Creations, LLC (“RC Creations”)

Acme Smoked Fish Corporation (“Acme”), the parent company of RC Creations, was incorporated in 1954, and is continuing to grow. It is adding more product lines and new packaging. The company uses vacuum-pack technology to produce both traditional salty lox and cold-smoked salmon packs. Since 2000 it has expanded to the west coast and into south Florida.

This facility will import fresh-frozen whole salmon from South America, Europe, and Canada. Once smoked, the salmon will be measured and packaged according to customer specifications and then shipped for distribution.

Acme initially considered locations along the eastern seaboard from Massachusetts to Georgia. More than 150 sites were evaluated, and the list was narrowed to five states: Georgia, Maryland, North Carolina, South Carolina, and Virginia. After site visits by the principals of the company were completed, North Carolina and Virginia remained in contention for the project. The Virginia site would have allowed the company to receive \$7 million in equity on its capital investment within 7 years of completion of the New Market Tax Credit process. Virginia’s offer also included a \$2 million extension of the natural gas line.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

Sturm, Ruger & Company, Inc. (“Ruger”)

Ruger is principally engaged in the design, manufacture, and sale of firearms to domestic customers. Its design and manufacturing operations are located in the United States. It offers products in three categories: rifles, pistols, and revolvers.

Ruger required a new manufacturing facility to accommodate increased growth and planned new products. This facility will begin with multiple manufacturing lines employing production workers, tool makers, manufacturing engineers, and product design engineers.

Ruger established an internal site selection team that considered the following factors for: workforce quality and availability, gun industry regulations, operating cost structure, availability of incentives, natural disaster risk, and real estate options. States or municipalities not offering strong incentive packages were eliminated. The final states considered were Texas, South Carolina, and North Carolina.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

Syngenta Biotechnology, Inc. (“SBI”)

Syngenta Corporation (“Syngenta”) is one of the largest agribusiness companies in the world, with global sales in 2012 of \$14.2 billion. Syngenta operates in the crop protection market and the commercial seed market, among others. Its seed portfolio offers over 200 product lines and over 6,800 varieties of Syngenta’s proprietary genetics. Syngenta was founded in November 2000 as a result of a spin-off and merger between Novartis AG’s crop protection and seeds business and AstraZeneca PLC’s agrochemicals and biotechnology business. The company headquarters is in Basel, Switzerland.

The project consists of a new laboratory and office facilities for the company’s new Syngenta RTP Innovation Center.

North Carolina, Iowa, and Minnesota were under consideration for this project. International locations in China, Brazil, and France also factored into the decision-making. The company stated that site consolidations, expansions, access to scientific resources, community support, discretionary incentives, and economic conditions were considered before the final choice of NC was made.

For information regarding the specific job creation, wages, investment and location of this project, please refer to Tables 1 and 2.

XPO Logistics, Inc. (“XPO”)

XPO is a third-party shipping logistics provider. XPO provides three core services: freight brokerage, expedited transportation, and freight forwarding. XPO serves customers in the U.S., Canada, and Mexico with domestic and international freight destinations.

As part of the next growth segment in its trucking brokerage operations, XPO is expanding its truck brokerage workforce with this project. The company conducted an extensive analysis to identify the optimal location. It evaluated its existing new facilities to determine the capacity for growth at each. This analysis considered impacts of operational costs and labor availability. XPO had two finalist locations: Charlotte, NC and Gainesville, GA. The company stated that Georgia’s labor and real estate costs are lower than North Carolina’s, while North Carolina scored high in labor availability and quality. The sites had similar characteristics, and the company reported that financial incentives were a key factor in the final decision.

For information regarding the specific job creation, wages, investment and location of this project please refer to Tables 1 and 2.

VII. Conclusion

The JDIG program has been a widely used tool in the competitive incentives market for attracting investment in North Carolina. The jobs, investment, and spending of projects supported by JDIG grants are believed to enhance the strategic economic development of the state and the increase in revenues to the state's general fund has been substantial.

Attachment C. Certified JDIG Grantee 2013 Report Findings Paid in CY 2013 (all Grantees)

Note: 2012 is the latest year company results have been certified. 2012 information is not included for several companies whose annual grantee reports have not been finalized. Most delays relate to changing names, corporate structures, or completing financial statements. Any of these could be eligible for payments based on CY 2012 performance. The companies are: American Roller Bearing Company of North Carolina, Caterpillar Inc. (Bee), Citco Fund Services (USA) Inc., Infinisource, Inc., Linamar North Carolina, Inc. I, Semprius, Inc., Siemens Energy, Inc. (Smart Grid), TWC Administration LLC (I), TWC Administration LLC (II), TWC Administration LLC (III), and Zenta Mortgage Services, LLC.

Other companies who had not finalized reports in 2013 but who terminated in early 2014 are Mitsubishi Nuclear Energy Systems, Inc. and Sypris Technologies, Inc.

Some companies were paid based on CY 2011 performance in 2013 due to the types of delays noted above as well as delayed appropriations to use for making grant payments. They are included here.

Note: Some companies showing zero dollars of investment may not have been required to submit investment totals at the time of this report. Investment is only required to be reported to the Department of Commerce one time, and is typically done after the company has completed making initial investments in a project. Often this requirement comes at the end of a company's base period/job creation period. Some companies are not required to submit investment figures if projected investment is low. Retention shown as zero may represent a company that was new to North Carolina and did not have current operations at the time the grant was awarded. Note also that the grant awarded to United Technologies Corporation changed its reporting name to Hamilton Sunstrand Corporation.

Attachment D. Annual Disbursements for Grants Awarded in CY 2003-2011

Note that historical data were reviewed for errors in 2013 and may contain updated values when compared to previous JDIG annual reports.
