Software developers are the creative minds behind computer programs. They develop applications that allow people to do specific tasks when using technology tools.

What do they typically do

- Consult with customers about software system design and maintenance
- Analyze users' needs and then design, test, and develop software to meet those needs
- Research and evaluate factors like required reporting formats, costs, and security needs to decide how to configure hardware
- Change existing software to correct errors, adapt it to new hardware, or improve performance
- Determine system performance standards
- Design each part of the application and plan how the pieces will work together
- Document every aspect of the application as background for future maintenance and upgrades
- Collaborate with other computer specialists to create the best possible software

Work Place

Many applications software developers work in office environments for employers such as insurance carriers or corporate headquarters. In general, software development is a collaborative process and developers work on teams with others who contribute to designing, developing, and programming successful software. Some developers telecommute (work away from the office). Most software developers work full time, and long hours are common.

Top Skills & Abilities

- Writing computer programs
- Making equipment and technology useful for customers
- Installing equipment, machines,

Knowledge/Specialties

- Administration and Management
- Computers and Electronics
- Design
- Engineering and Technology
- English Language
- Mathematics
- Telecommunications

Experience

A considerable amount of work-related skill, knowledge, or experience is needed.

Training

Usually several years of work-related experience, on-the-job training, and/or vocational training.

Occupation Profile

Software developers are the creative minds behind computer programs. They develop applications that allow people to do specific tasks when using technology tools.

What do they typically do

- ✔ Consult with customers about software system design and maintenance
- ✔ Analyze users' needs and then design, test, and develop software to meet those needs
- ✔ Research and evaluate factors like required reporting formats, costs, and security needs to decide how to configure hardware
- ✔ Change existing software to correct errors, adapt it to new hardware , or improve performance.
- ✔ Determine system performance standards
- ✔ Design each part of the application and plan how the pieces will work together
- ✔ Document every aspect of the application as background for future maintenance and upgrades
- ✔ Collaborate with other computer specialists to create the best possible software

Software developers are the creative minds behind computer programs. They develop applications that allow people to do specific tasks when using technology tools.

What do they typically do

- ✓ Consult with customers about software system design and maintenance
- ✓ Analyze users' needs and then design, test, and develop software to meet those needs
- ✓ Research and evaluate factors like required reporting formats, costs, and security needs to decide how to configure hardware
- ✓ Change existing software to correct errors, adapt it to new hardware, or improve performance
- ✓ Determine system performance standards
- ✓ Design each part of the application and plan how the pieces will work together
- ✓ Document every aspect of the application as background for future maintenance and upgrades
- ✓ Collaborate with other computer specialists to create the best possible software

Work Place

Many applications software developers work in office environments for employers such as insurance carriers or corporate headquarters. In general, software development is a collaborative process and developers work on teams with others who contribute to designing, developing, and programming successful software. Some developers telecommute (work away from the office). Most software developers work full time, and long hours are common.
